 - Under nutrition
 - Over crowding

Question numbers xi-xv consist of two statements-Assertion (A) and Reason (R). Answer these questions by selecting the appropriate options given below.

- Assertion: ABER (Annual Blood Examination Rate) should be less than 5%
Reason: API (Annual Parasite Incidence) depends on the number of blood slides screened for malaria parasite
 - Both A and R are true and R is the correct explanation of A
 - Both A and R are true and R is not the correct explanation of A
 - A is true, R is false
 - A is false, R is true
- Assertion: Man is a dead end host in Japanese encephalitis disease
Reason: Cattles and Buffaloes act as mosquito attractants
 - Both A and R are true and R is the correct explanation of A
 - Both A and R are true and R is not the correct explanation of A
 - A is true, R is false
 - A is false, R is true
- Assertion: All children of a boarding school are treated for scabies infestations
Reason: Cyclops is the intermediate host in scabies
 - Both A and R are true and R is the correct explanation of A
 - Both A and R are true and R is not the correct explanation of A
 - A is true, R is false
 - A is false, R is true

(PTO)

- xiv. Assertion: child health is a component of 5x5 matrix for RMNCH+A
Reason: Immunisation is a specific protective measure
a) Both A and R are true and R is the correct explanation of A c) A is true, R is false
b) Both A and R are true and R is not the correct explanation of A d) A is false, R is true
- xv. Assertion: Consumption of iodized salt prevents goitre
Reason: Consumption of vitamin A rich food reduces bitots spots
a) Both A and R are true and R is the correct explanation of A c) A is true, R is false
b) Both A and R are true and R is not the correct explanation of A d) A is false, R is true

Question numbers xvi-xx are multiple response type questions read the statements and mark the answers appropriately

- xvi. Registration of all pregnant woman before 12 weeks is to
1) Assess the health status of mother
2) screen for risk factors early
3) Obtain base line information on blood pressure hemoglobin and weight
4) Manage risk factors and refer to FRU/district hospital
a) 3, 4 are correct b) 1, 3 are correct c) 2, 3, 4 are correct d) 1, 2, 3, 4 are correct
- xvii. In case of a pet dog bite with bleeding
1) The pet dog should be observed for 10 days
2) The wound should be washed for a minimum period of 10-15 minutes
3) No need for ARV (Anti rabies vaccine)
