**WEBINAR ON "CYBER SECURITY" AND "CYBER ETHICS"**

Cyber security refers to every aspect of protecting an organization and its employees and assets against cyber threats. As cyber-attacks become more common and sophisticated and corporate networks grow more complex, a variety of cyber security solutions are required to mitigate corporate cyber risk. Cyber security can be described as the collective methods, technologies, and processes to help protect the confidentiality, integrity, and availability of computer systems, networks and data, against cyber-attacks or unauthorized access.

The term "cyber ethics" refers to a set of moral rules or a code of behaviour applied to the online environment. As a responsible netizen, you should observe these rules to help make cyberspace a safe place.

This webinar is intended to serve as a remedial and refresher program for the faculty to get updated with recent advancements in the field of Cyber security and cyber ethics.
